

**1**

THE PRINCIPLE OF E WATER

The principle behind this technology is the same as combining specific ingredients in cooking: under specific conditions, creates a new substance that is very different from its component parts.

This is why ingredients as basic as salt and water can be converted into a cleaner & disinfectant powerful enough to kill microbes like MRSA, Staph, Salmonella, Norovirus & Influenza A.

2

HOW DO YOU CREATE ELECTROLYSED SALT WATER?

When an electrical charge is passed through a salt (NaCl) solution, the sodium separates from the chloride. Chloride is negatively charged and is attracted to the positive side of the electrical charge where it bonds with oxygen and hydrogen from the water. It gets converted from Cl^- to HOCl , otherwise known as hypochlorous acid. This is the molecule that's the same substance your immune system produces to fight infection. As a neutrophil, hypochlorous acid is produced by your white blood cells, and if you happen to be near a sneezing child or co-worker right now, rest assured your body is producing it as you read this.

3

WHY YOU WON'T FIND ELECTROLYSED SALT WATER SOLD ON A STORE SHELF?

Just like bubbles in a carbonated drink, hypochlorous acid starts to dissipate over time. That means a bottle of electrolysed salt water sitting on a store shelf or in a warehouse would lose its efficiency within just a few weeks. This is why it is a cleaner you have to make fresh at home.

WHAT IS E WATER?

Using the E BOTTLE, with just 1/2 teaspoon of table salt and tap water, turn on the E bottle for just 10 minutes to create your own, non toxic;

Hand sanitiser water
Food Steriliser water
Household Steriliser

Because hypochlorous acid is so gentle, it is used and approved for use in products like:

Wound healing, Eye care, Veterinary care, Food preservation & Organic crop production.

Safe in the knowledge that it is non toxic and yet is a powerful antibacterial disinfectant.

High touch areas

Glass & Mirrors

Electrolysing salt and water for many years been known to be a powerful antibacterial and fungicidal.

80 times more effective at killing dangerous bacteria and germs like E. coli and salmonella than chlorine. It kills them faster - in less than five seconds.

The E water bottle creates a highly effective detergent and degreaser that effortlessly breaks down stubborn oils and greasy films on all types of surfaces - from stainless steel cooker hoods, oven doors and hobs, windows and kitchen equipment, to hand washing - without different products and the use of expensive toxic chemicals.

Electrolysed SALT water, the new name in sustainable, powerful, non toxic cleaning.
